

## Plyterra Laser

*100 % birch plywood for laser cutting*

**Application:** Die cutting, production of toys

Plyterra Laser is a high-quality plywood produced specially for manufactures where laser cutting is used. Laser cutting has application in many industries, however, it is most popular in the cutting dies production. This special plywood is used as a platform for keeping the knives of the die cutting board in a proper way.

To produce Plyterra Laser we use only solid (whole) birch veneer for both face and inner layers with a minimum number of defects. It helps to eliminate voids inside the product.

We use adhesive based on special resin, which is not subject to combustion under the influence of the laser beam and safe for health. Thus, our product meets the strictest requirements of the cutting dies manufacturers and has already received the approval of professional die-makers. Plyterra Laser also has such properties as improved flatness, strength, durability and light weight.
